# Focusing on the information technology needs of UN Police

 Workshop on Information Technology Needs of UN Police Participants

The first Workshop on Information Technology Needs of UN Police took place at the UN Information and Communications Technology Facility in Valencia on 20 and 21 January.

The workshop was organized by the Police Division of the Office of the Rule of Law and Security Institutions in partnership with the Office of Information and Communications Technology (OICT).

It considered:

- the use and adoption of existing United Nations tools that can support the effective implementation of United Nations Police mandates in diverse operating environments;

- how integrated United Nations Police data can inform whole-of-mission efforts; and
- technology gaps, challenges and potential remedies.

The participation of the senior leadership of various police components and managers from OICT, as well as participants from OHCHR, ZIF Center for International Peace Operations, UNODC, NATO Stability Policing, and the Centre of Excellence for Stability Police Units (CoESPU), enhanced the discussions and interactions.

The workshop paved the way for a stronger future cooperation between the two offices.
